

HPV vaccination is the best protection against 6 types of cancer.

Cervical Cancer Just the tip of the iceberg.

Cervical cancer is the only type of HPV cancer with a recommended screening test to detect it at an early stage.

Estimated U.S. Cases Every Year^{1,2}

10,900

Cervical Precancers

While screening can detect precancers before they turn into cancer, treatment for these precancers can lead to **problems during pregnancy.**

196,000

5 Other HPV Cancers

There are no recommended screening tests for these 5 cancers, so they may not be detected until they cause **serious health problems.**

13,500

Back of the throat

6,200

Anus

2,800

Vulva

800

Penis

600

Vagina

HPV vaccination at ages 11-12 could

PREVENT OVER 90%

of these cancers.
