WHY SHOULD YOUR CHILD GET THE COVID VACCINE?

- THE COVID VACCINES ARE SAFE AND EFFECTIVE. The vaccines were tested in thousands of participants and approved for Emergency Use Authorization by the FDA based on their good safety and efficacy profile.
- As of Dec 31, 2020, more than 2.2 million kids in the US have been infected, and thousands have been hospitalized. The vaccine is important for the health and safety of children, but also to prevent further spread to parents, grandparents, and teachers.
- Vaccines are critical to eradicating COVID-19. It's much safer to get the vaccine than to contract the disease.

TAKE ACTION NOW

- Teens and children will not be eligible to receive routine vaccines 2 weeks before OR after they get the COVID-19 vaccine.
- Coordinate your appointments with your Primary Care Provider or local health department to ensure there is no delayed or missed vaccines!
- Vaccines are needed to safely return to school for in-person learning, sports, and after school activities.

BE INFORMED & TAKE CONTROL

- False and misleading information can often run rampant on social media leading to uncertainty and fears. Combat rumors and information that are not fact-based.
- Your doctor is there to help! If you have questions or concerns be sure to voice them during your appointment.
- Being informed helps provide a sense of empowerment, control, and safety over your families health.
